

## Carriageway & Footway Asset Management Plan

Develop Kingston's asset management plans (AMPs), supporting tools and investment business case through carriageway and footway condition data collected.

### OUR APPROACH.

- Working with the planned and responsive maintenance teams at Kingston to understand the Council's current asset management practices.
- Collecting asset condition data using a bespoke cycle-survey specification to inform supporting AMP tools.
- Developing further asset management processes to improve on the current practices going forward such as, investment modelling and lifecycle planning.
- Engaging with the relevant stakeholders at key stages throughout the project to ensure the AMP is owned and adopted by both planned and responsive maintenance teams.

### PROJECT OUTCOMES.

Through this project, Kingston Council has:

- A concise AMP documenting the Council's asset management practices aligned to the HMEP asset management guidance document.
- Improved asset knowledge, condition data and process documentation.
- A robust business case to support their bid to increase Council capital funding for carriageways and footways.
