

Data Collection Management

With various data suppliers collecting information at different timings throughout the year, Croydon engaged Metis to support and manage their data collection processes.

OUR APPROACH.

- Review current data suppliers and information collected across the network.
- Rationalise data collection approach and set-up a longer-term data collection strategy.
- Prepare tender documentation and specification for carriageway and footway data collection, as well as, core and tar testing.
- Manage independent data suppliers and information being collected on a day-to-day basis.

PROJECT OUTCOMES.

Through this project, Croydon Council has:

- Established a 3-year data collection framework, securing low contact rates for a fixed period of time.
- Generated a robust approach to data collection for carriageways and footways, resulting in consistent information being provided across the years.
- Developed a core and tar testing regime, to provide Croydon with a foresight of potential issues in their annual maintenance programme.
