

Scheme Reprioritisation with Regenerate-SP

Spending public money must be transparent and provide maximum benefit to the community and encourage economic activity. South Gloucestershire wanted social benefit included in their works prioritisation.

OUR APPROACH.

- Metis developed a web-based tool, Regenerate-SP, that enables highway maintenance programmes to be developed based on the needs of the community.
- Utilised South Gloucestershire's pavement condition data.
- Established service measures that are meaningful to South Gloucester authority.
- Input South Gloucestershire's specific pavement treatment options.
- Stakeholders used the web-based survey to weight service measures.
- Established a works programme prioritised against what is important to South Gloucestershire and the stakeholders.

PROJECT OUTCOMES.

Through this project, South Gloucestershire Council has used Regenerate-SP to achieve the following:

- Transparent decision making process and improved local accountability.
- Involving Members of the Council, committees, focus groups and the general public in decision making
- Time efficient and fully auditable.
- Programmes reprioritised to meet community need and engineering need.
